

1. How can we obtain data on courses and students?
2. What are the common problems that you or the students face in the current registration system? Are there any less common problems that you'd like to make us aware of?
3. Should students be able to log in to the dummy registration system using their eLearning credentials, portal credentials, or new credentials?
4. Is the dummy registration system accessed through a website link within the portal, or is it a separate website?
5. Should we use the same colors in the dummy registration system as the portal and eLearning platform?
6. Should the system include a feature where students can choose the importance or urgency of registering for each course in the next semester?
  - a. If yes: should this feature be a dropdown list (low, medium, high) / numerical scale (1 to 5) / rank the courses they registered in the order that is more important to them / other.
7. Should we enable students to register for courses as exceptions, even if the courses are not in their study plan or they lack the prerequisites, and use a flag to indicate these exceptional registrations?
8. Should the system also recommend a schedule for each school (i.e., which courses to take at what times)? (it will increase scope)
9. Should the system provide recommendations to students regarding which courses they should take?
10. Should students be able to select any time option for their courses, or does the system only display the available time options for each course?
11. Should the system provide notifications to students if a course they requested is added?
12. Should students be able to see what courses are being requested by others? (current registration count for each course)
13. How many concurrent users should the system be able to handle during peak times?

14. What is the predicted number of students in the upcoming years (scalability)?
15. Do you want the dean and head of department to see the results of the dummy registration in a dashboard or an analytical report?
16. What specific analytics do you expect to get from this system?
  - b. Suggestions: count of students registered for each course, average priority of each course, time slots for each course ranked, etc.
17. How do you expect the system to look like? Do you expect it to look like the current registration system or do you have another vision?
18. What are the data regulations that HTU follows regarding the registration system?
19. Are there any regulations imposed by external entities that HTU must comply with regarding this system?
